

Amaan Khan.

Product Designer & Engineer — I design products end-to-end, then build them.

Hyderabad, India (open to Bangalore · Mumbai · Remote) · +91 81216 02314 · mdamkhan.work@gmail.com · readmet3xt.github.io · linkedin.com/in/readmetxt

PROFILE

Product designer who ships the code too. RCA-trained service designer (M.A., Royal College of Art) with a full-stack build background — I take products the whole way, from user research and service blueprints to **production React and AI integration**. Founding designer behind a fintech that grew to 70,000+ users; most recently I solo-designed, built, and launched **Otagon**, a production AI gaming companion on web and PWA with paid tiers.

EXPERIENCE

Otagon — AI gaming companion (solo product) otagon.app · [case study](#)

Aug 2025 – Present

Founder & Product Engineer

- Spotted that gamers burn 3–5 minutes per question alt-tabbing to wikis — solo-designed and shipped a production PWA: **30+ features, 3 subscription tiers, 150K+ game library**.
- Invented the **OTAGON Tag system**, a structured AI output format that reads game, location, and progress straight from screenshots — **95%+ detection accuracy**, with answers that stay spoiler-aware and progress-calibrated.
- Designed **8+ genre-specific AI personas** and two interaction modes (Playing vs. Planning) from behavioural research, so guidance fits both the game and the moment.
- Cut AI API costs **~40%** with a context summariser and shared game-knowledge cache that keep costs flat at any chat length — **zero critical incidents** since launch.
- Hardened for production: payments through a secrets-scoped Supabase Edge Function, row-level security on every user-data table, and a full security audit.

React 18

TypeScript

Supabase

Gemini 2.5

Tailwind CSS

Framer Motion

Lemon Squeezy

Law.X — legal AI assistant [case study](#)

Mar 2025 – Apr 2025

Product Designer (Contract)

- Reframed the brief from “make the AI smarter” to “make the AI **verifiable**” — a Glass Box interface that surfaces the model’s reasoning chain live, turning lawyer scepticism into trust.
- Designed a cohesive legal workspace across seven flows: split-pane layout, persistent tone and jurisdiction controls, a curated prompt gallery, and multi-client navigation.

KoinBasket — crypto investment platform [case study](#)

Jun 2024 – Mar 2025

Senior UX Designer

- Led a cross-platform redesign unifying mobile and desktop, driving a **42% lift in user engagement**.
- Created **BitBuddy**, a live-trading social layer where influencers broadcast strategies and users trade from the same screen — turning a utility into a content-commerce platform.
- Hired and mentored the company’s first junior designer, scaling design beyond a team of one.

Founding Designer

Oct 2022 – Jun 2023

- Sole founding designer: shipped the MVP in one week and built the design system that scaled to **70,000+ users**; led a full rebrand.
- Streamlined onboarding and Binance/Coinbase payment flows, cutting transaction friction **~20%** with simpler authentication.

Designer (Internship)

- Co-led UX for a 7-engineer build: ran a 13-stakeholder workshop, in-station field research, and usability testing with 9 users — cutting ticket checkout time **40%**.
- Diagnosed two critical usability failures and rebuilt the booking flow into a single-screen interface with inline editing and Apple Pay — validated inside the 8-week internship.

Think Design — design research

Apr 2020 – May 2020

Design Research Intern

- Qualitative research on how communication norms shifted during COVID-19, informing strategy on the “new normal” of user interaction.

INDEPENDENT BUILDS — SOLO-DESIGNED, SOLO-BUILT

Versus · real-time tournament tracker · [case study](#)

Ongoing

Leagues, knockouts, live scoring, and a spectator link friends open on their phones — a static SPA on Supabase + WebRTC, built for real game nights.

ScreenShot · PC → phone capture sync · [case study](#)

Ongoing

Press F1 on your PC, see it on your phone seconds later — pairing-code sync, gallery, and an installable PWA, shipped in two weeks.

ACADEMIC PROJECTS — ROYAL COLLEGE OF ART

Pebble · service design · VISA Innovation Centre · [case study](#)

2021

Led service design end-to-end (**1,200+ surveys, 24 co-creation workshops**, data-backed personas); the Virtual Café concept was adopted into **VISA Innovation Centre's** collaboration roadmap.

Soul at Work / I.V.I. Program · speculative design · BCG · [case study](#)

2020

Co-created a speculative service quantifying women's unpaid labour (79 participants) — **Core77 Student Notable**, with the research framework adopted by **BCG**.

Stampede · service design · WWT × Airbnb · [case study](#)

2019

Designed and ran the co-creation workshop that kicked off the **WWT × Airbnb partnership** — described by participants as “100× more productive” than standard meetings.

EDUCATION, CERTIFICATES & HONOURS

Royal College of Art

M.A. Service Design

London, UK

Osmania University

B.E. Mechanical Engineering

Hyderabad, India

London Business School

Brand Management — certificate

London, UK

◆ **Core77 Design Awards 2021** — Student Notable, Speculative Design

◆ **Merit, Critical & Historical Studies** — Royal College of Art

SKILLS & TOOLS

DESIGN

Service design · UX/UI · User research · Prototyping · Design systems · Information architecture · Usability testing · Journey mapping

ENGINEERING

React 18/19 · TypeScript · Supabase · AI integration (Gemini / OpenAI) · PWA · Performance optimisation · Database design

TOOLS

Figma · Framer · Webflow · Cursor · Claude Code · VS Code · Vercel · Miro

LEADERSHIP

Workshop facilitation · Stakeholder management · Hiring & mentoring · Presentation
